Claim 13 is pending in the instant application.

Claim 13 are objected to as reciting an improper Markush Group. M.P.E.P. 803.02 states that:

"Since the decisions in *In re Weber* **, 198 USPQ 328 (CCPA 1978); and *In re Haas*, 198 USPQ 334 (CCPA 1978), it is improper for the Office to refuse to examine that which applicants regard as their invention, unless the subject matter in a claim lacks unity of invention, *In re Harnish* , 631 F.2d 716, 206 USPQ 300 (CCPA 1980); *Ex Parte Hozumi* , 3 USPQ2d 1059 (Bd. Pat. App. & Int. 1984). Broadly, unity of invention exists where compounds included within a Markush group (1) share a common utility and (2) share a substantial structural feature disclosed as being essential to that utility."

The nine different amino acid sequences recited in claim 9 do not appear to share a common utility that is based upon a shared structural feature lacking from the prior art.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 13, in so far as it is drawn to an antibody which binds to a polypeptide having the amino acid sequence of SEQ ID NO:2, classified in class 530, subclass 388.22.
- II. Claim 13, in so far as it is drawn to an antibody which binds to a polypeptide having the amino acid sequence of SEQ ID NO:4, classified in class 530, subclass 388.22.
- III. Claim 13, in so far as it is drawn to an antibody which binds to a polypeptide having the amino acid sequence of SEQ ID NO:6, classified in class 530, subclass 388.22.

- IV. Claim 13, in so far as it is drawn to an antibody which binds to a polypeptide having the amino acid sequence of SEQ ID NO:8, classified in class 530, subclass 388.22.
- V. Claim 13, in so far as it is drawn to an antibody which binds to a polypeptide having the amino acid sequence of SEQ ID NO:10, classified in class 530, subclass 388.22.
- VI. Claim 13, in so far as it is drawn to an antibody which binds to a polypeptide having the amino acid sequence of SEQ ID NO:12, classified in class 530, subclass 388.22.
- VII. Claim 13, in so far as it is drawn to an antibody which binds to a polypeptide having the amino acid sequence of SEQ ID NO:14, classified in class 530, subclass 388.22.
- VIII. Claim 13, in so far as it is drawn to an antibody which binds to a polypeptide having the amino acid sequence of SEQ ID NO:16, classified in class 530, subclass 388.22.
- IX. Claim 13, in so far as it is drawn to an antibody which binds to a polypeptide having the amino acid sequence of SEQ ID NO:18, classified in class 530, subclass 388.22.

The inventions are distinct, each from the other because:

Inventions I to IX are nine distinct chemical compounds each of which can be made and used without the others. They lack unity of invention because they do

not share a common utility that is based upon a shared structural feature lacking from the prior art.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

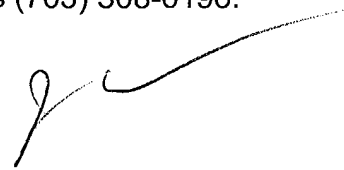

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
